

Get It Upgrade News

“What’s new for the beginning of 2006?” You asked us for reliable hardware validation logging to reduce Warranty charges. You *begged* us for detection and testing of removable media and the ability to test video RAM under WinPE. Check out the list below for more details.

QA+® is now in its 18th year! No other Windows-based diagnostic has more years of testing behind it! QA+® continues to keep system building and maintenance operations running smoothly. Oh, and just like our Pc-Check® Diagnostic Software, remember to update your QA+® testing methods with a QA+® Upgrade Subscription. Upgrading your QA+® keeps your hardware testing methods current. **Upgrades sent to you automatically for 1 year!!**

NOTE: Upgrade features apply to PC Builder QaTest32 and Virtual QA+ modules.

NEW! QA+ Features

- **NEW!! Removable Media Tests**
- **Enhanced Network Card Testing**
- **Enhanced Audio Testing**
- **Enhanced Memory Testing**
- **Enhanced Processor Testing**
- **Enhanced Modem Testing**
- **NEW!! Firewire test**

The Benefits to You

- ...identify test and validate removable media such as card readers, and tape drives that are connected to a PC.
- ...greater support for testing multiple network interface cards in a single PC.
- ...now provides the ability to select from either the back or front panel and includes stereo support for microphones.
- ...test more than 4GB of memory and includes support for Non Uniform Memory Architectures in multi-core processor PCs.
- ...detect and fully test CPUs including full support for hyperthreading multiple caches, dual and multi-core.
- ...increased coverage allows you to test a wider variety of modems than ever before, and it’s now easier to test them using WinPE.
- ...fully identify and test firewire controllers.
