Eurosoft unveils Pc-Check® 6.20

Bournemouth, UK – 14 February 2008 – Eurosoft (UK) Ltd., worldwide developer of computer diagnostic and test products since 1980, today announced the latest release of Pc-Check®, its flagship test software for computer service organisations and computer manufacturing teams. Pc-Check®, with over 22 years of hardware testing know-how, is a key component of Eurosoft's established suite of specialist diagnostic tools.

This latest release of Pc-Check® will further enable considerable savings in time and effort, and significant improvements in testing efficiency. Over the past year, the Pc-Check® engineering team have targeted the development of diagnostic features that are crucial to computer service organisations and computer manufacturing teams. For example, system stress testing to “time-slice” hardware testing now includes video and hard disk write scripts. This essential release, with features such as critical hardware testing for 64x Processor Core and 64x Memory Modules, helps to reinforce Pc-Check's® position as a world class computer testing product.

Upgrades to existing features include enhanced memory testing, CPU detection and testing, revamped hard disk testing, enhanced SMART drive testing and enhanced Trusted Platform Module test. All-new features include High Definition Audio tests, new hard disk performance check, and new network card controller tests for speeds of 1GB or more.

Pricing and availability

Pc-Check® 6.20 began shipping today to customers worldwide, and is available as an upgrade, pack or site licence directly from Eurosoft and authorised representatives or online at www.eurosoft-uk.com. Pc-Check® price for single-user license is GBP 150 or USD 299.90.

Upgrades and technical support are provided automatically for one year from purchase.
