

Pc-Check® v8.05

Enhanced processor support for Intel Sky Lake chipsets. Enhancements made to command line switches to help identify and test more serial ports, particularly for industrial systems.

Pc-Check continues to provide the greatest test coverage possible, on the widest variety of PC systems, in an OS free, self-booting environment.

Eurosoft has helped users worldwide to find millions of computer failures since 1980. No exaggeration.

Developing intricate computer diagnostic software – because other hardware tests miss them completely – Eurosoft fulfils challenging testing needs for computerbased environments. Supporting computers built around Microsoft, AMD and Intel technologies, we determine missing, failed and perfect computer components – regardless of brand.

Pc-Check® gives you the confidence you need to validate working versus problematic hardware. Pc-Check® has more commercial years of professional users than any diagnostic software. Join our dedicated customers, from OEM to local service shop, ensuring reliable test results today.

Pc-Check® upgrades keep you up-to-date with the latest diagnostics and best case testing practices. You can count on a continued flow of reliable test results whether you are building, installing, supporting, servicing or refurbishing computers. Pc-Check® offers you greater support for testing multiple devices regardless of operating systems.

Pc-Check® features	The benefits to you
Enhanced processor testing	Support added for testing the new generation of Intel Sky Lake and Sky Lake E Chipsets keeping your testing methods for the latest hardware up to date.
Enhanced serial port testing	Added support for IRQ 6 to command line switch /SP to allow you to identify Serial Port IRQ's. Normally reserved for the Floppy Disk Controller, a number of systems are starting to utilise this IRQ in the absence of a Floppy Controller. Particularly useful when testing industrial systems. Also includes improved testing for EPOS Systems with more than 4 Serial Ports.
Enhanced Network adaptor support	Now includes support to identify and test Intel Lynx Point network adaptors.
Enhanced PCI device identification	Updates to the PCI Device and Vendor database makes it possible to identify and test more PCI devices than was previously possible.
