

Pc-Check® v8.01

Enhancements made to memory testing, including support for larger individual DIMMS, enhanced reporting for optical devices, and updated PCI device information for the latest devices. Pc-Check continues to provide the greatest test coverage possible, on the widest variety of PC systems, in an OS free environment.

Eurosoft has helped to find millions of computer failures since 1980. No exaggeration.

Developing intricate computer diagnostic software – because other hardware tests miss them completely – we fulfil challenging testing needs for computer-based environments. Supporting computers built around Microsoft, AMD and Intel technologies, we determine missing, failed and perfect computer components – regardless of brand.

Pc-Check® is a key computer testing tool you won't want to be without. No other diagnostic has more years of testing behind it.

Pc-Check® upgrades are indispensable. Count on a continued flow of reliable test results whether building, installing, supporting or servicing computers. Pc-Check® offers greater support for testing multiple devices regardless of operating systems.

Pc-Check® features	The benefits to you
New larger DIMM memory support	Correctly identify and test individual memory modules that exceed 32GB.
New detection of MCP51 network controller	Now displayed in the system overview, detect and test a wider range of network controllers.
Enhanced display of memory devices	Memory device size is now displayed in Gigabytes, or Terabytes where appropriate, making it easier to quickly confirm the amount of memory.
Enhanced optical device reporting	All installed CD, DVD or Blu Ray drives are now identified in both the System Overview and Component Audit modules.
Enhanced AHCI driver support	Model information and SMART testing now available for Intel Series 7/ C216 chipset family (e.g. Mobile Intel QM77 Express, ThinkPad T430).
Updated PCI detection	PCI detection and testing now includes the latest devices providing greater test coverage of a wider variety of PC systems.
