

Pc-Check® UEFI V1.02

Pc-Check UEFI provides an entire new set of tools and applications. Unlike other so called “native” UEFI diagnostics, Pc-Check® UEFI diagnostics directly access and test essential components. No operating system in the way – no Linux, no Windows, no secure boot issues – **only UEFI testing in pure native mode.**

Developing intricate computer diagnostic software – because other hardware tests miss them completely – Pc-Check UEFI is NEW and it's indispensable. Count on a continued flow of reliable test results whether building, installing, supporting or servicing computers. Pc-Check UEFI now offers greater support for testing multiple devices in a native 64bit UEFI environment.

Eurosoft has helped to find millions of computer failures since 1980. No exaggeration!

Including the original Pc-Check® Self-boot, Pc-Check UEFI offers the ultimate ‘bare-metal’ testing solution. Combine with Pc-Check® Windows expanding your range of diagnostics to a perfect 3-point test plan.

Pc-Check® UEFI features	Benefits for You
Includes Pc-Check Self-boot	Full testing solution for legacy, and new UEFI based PCs all in one single package.
NEW Report options	Includes new Windows PDF report generation utility aligns report format with Pc-Check Windows. Save reports by job number or work order number for easy identification.
NEW Motherboard tests	Greater test coverage, extended to include Non-Volatile Storage and the Real Time Clock.
Enhanced BIOS compatibility	Improved reliability with BIOS lacking the correct implementation of UEFI standards. Includes BIOS leaving processor cores in disabled state, early signaling of DMA completion resulting in Cache Test failures.
Enhanced hard drive testing	Added support for SAS drives and SAT protocol support to allow full range of testing on SATA drives that are attached via a SAS controller card rather than to a normal SATA controller (i.e. AHCI).
Enhanced configuration options	After running a predefined script on start up, you now have the option to return to the main menu to perform further interactive testing without exiting the program.
Enhanced serial port testing	Smart serial port loopback detection will now return a 'Not Available' test result instead of 'Failed' when a loopback plug is not present.
